Writing

They say the future is coming. Sooner or later, there will be no more place for a human in manual jobs. Those robots and modern programs are going to change our lives, let us have more free time, never let us feel exhausted anymore etc. What a nonsense!

I live in Sacramento and recently my son had offered me to go with him to Silicon Valley by his new car, Tesla, which has an autopilot! I didn't quite like this modern stuff, but eventually decided to go.

After 30 years of working as a truck driver, I was fascinated by my son's new car. I didn't expect such an excitement from Tesla's amazing exterior and interior.

The car's main feature was its electricity, which means it needed no gas, but the charging, so it was charged before leaving. While driving in the town, we couldn't use its automatic driving, but as soon as Sacramento's borders were reached and our car's wheels were on the highway, the magic began to happen. After touching a couple of buttons, the car kept driving without hands on the steering wheel! I was extremely amazed and scared at the same moment. All the way to Silicon Valley we've been talking about these new technologies.

Unfortunately, my thoughts weren't all bright. The world's not staying at one place, but what is going to happen to us, the common workers? Who am I going to be when such cars start driving instead of old-fashioned manual trucks? What will do the people who may lose their jobs because of robots? The future won't be happy for everyone, unless we think about the consequences this modern stuff may cause.
