After ^{the} opening of a new canteen in our school, the students have flooded it. Everyone wanted to try the new food. This report will show what is the opinion of the pupils about the new canteen as well as propose how it may improve.

To know more what people think I have conducted a survey. I have asked 48 students questions concerning the size, the atmosphere, the food and the prices. The size is at the top of the list with 98% positive results.

About 76% of the participants answered that they like the atmosphere. But the rest of them answered negatively. This is partly because of the shouting children that make sitting in the canteen unbearable.

Regarding the food quality, about 88% are happy with their meals. The other 12% don't really like it. Most of them say that the food choice is very generic and boring. This problem can be solved by simply making several different meals per day.

The prices category is at the bottom of the list. When asked "Do you think the prices of the food are rational?" 56% of the students answered negatively. This is a major problem with our canteen. Not all the students can afford to buy expensive meals.

The students were also asked how they would have improved the canteen. The majority wanted a free water source. As you know, the water is not free and you have to buy water bottles. But the students are ready to pay a small amount of money so that the entire school can drink for free.

After conducting the survey, I have concluded that the major problems are the prices for the food and water. I and all the students hope that those problems will be solved soon.
